		Repair DH430839 160 Gordon Dr Media PA 19063 Date of service 2/23/22 Technician John Simons Arrived on site due to customer stating that the alarm would go off once in a while. Performed meter test in panel and found shorts to ground. Removed the lid to Station and found water in the electrical quick disconnect due to supply cable cable grip being completely loose. There was some sewer above the pump in the dry access as well. The hubble nut on the transition piece to station was not installed. Installed hubble nut and tightened to keep water from getting into dry access. Replaced the insert on the supply cable. Removed pump DH430839 from Station and inspected the switches and found they were corroded. Inspected the control clip and found that the capacitor had leaked and the contactor was burnt. Performed meg test on motor and it passed. Inspected the stater and it was good. Replaced the cutter wheel due to worn teeth. Returned the pump to Station and tested from Alarm. The station pumped out of Alarm and the pump cycled and shut off. Job complete
