		Replace DH390908 with new twp pump DH912933 Robert Riday 120 Rose Tree Road Media, PA 19063 Date of service 10/13/24 & 10/15/24 Technician Nick Butkewicz & Sebastian Gonzalez 10/13/24 Arrived on site and the pump wasn't running and the alarm wasn't on either. I did hear a clicking sound inside the panel. My meter checks came back fine. I checked the voltage and there was power coming into the contactor inside the panel but no power was coming out of the contactor to turn the alarm or pump on. I popped the lid and it's a deep station. About 12 ft and there was about 2 ft of water in it. I swapped out the contactor with one that I had and mine didn't work either. So I took the L1 and L2 cables for the pump and directly tied them into the breaker. The pump kicked on and pumped the water down and shutoff. I told the customer that our office would call his wife in the morning at 610-547-5880 to schedule someone to come out and put in a new contactor for them.			OK TO PAY KEVIN MATSON, PE, OPERATIONS MANAGER  11-11-2024

1	Emergency	10/15/24 Arrived on site to find panel not in alarm. Performed meter readings and all readings were good except switches and amps on pump were low. I also noticed that the panel had been hot wired from contact to breaker. And PCB needed to be replaced. Once i rewired the panel i went to the station to see pump was from 6/2011 I went to the upper Prov shed to grab customer new core #DH00912933. I pulled DH390908 and replaced with new core. Once I put new core into station I ran pump to alarm and performed meter readings and everything checked out good.
