		Tom Flick (Upper Prov) 210 Appletree Drive Media, PA 19063 Date of service 12/16 Technician Bryan Beebee Pump in alarm. Arrived on site to find panel in alarm with pump in constant run with a run dry notification. Meter readings showed both switches engaged with no shorts to ground. Pulled pump out of well and left the EQD connected and it did not stay in constant run. Opened up switch housing to find both tabs broken on the on/off switch and minor corrosion on both switches. Replaced the switches and put dry packs in the housing. Opened up the control housing to inspect MCB and housing. MCB looked good and housing was dry. Meg and motor winding resistance checks both came back good. Opened up the suction housing and found a bloated and cracked stator. Replaced that as well. Put pump back into station and it pumped out of alarm in under 3 minutes and out of normal operation in under 40 seconds. Pump is running properly at 237 volts and 5.8 amps.
