		Replace pump n/a with new twp pump DH00942264  Janet McFadden (Upper Prov) 321 Sycamore Mills Rd Media, Pennsylvania 19063-2029  Date of service 6/20 & 7/9 Technician Jon McKee & Pat Brady  Pump was replaced as a result from electrical damage, during the storm that took out power - starting the evening of 6/19/25 and carrying through that weekend. Due to the state of emergency throughout the area, Kevin Matson directed us to update older vintage pump, as necessary. Fortunately, it was only pumps that were more than 10 years old that seemed to have suffered. The common mode of failure: For each replaced pump - the existing was indicating an alarm, even after the level had returned to normal. Pumps continuously running - which was a result of damaged switches and burnt control clips. Ultimately the power surge on the control clips were the root cause of failure (as these pumps were called to RUN, when the voltage difference occurred), with the switches being secondary. This and a combination of worn stators, and compromised mechanical seals/bearings
