		Repair DH808876 Abby McGovern (Upper Prov) 945 Waters Edge Media, PA 19063 Date of service 10/14/25 Technician Kevin Rogan Arrived on site and although panel was energized (247v incoming) no indicators on panel dead front, immediate observation clearly showed panel full of detritus , further investigation and initial meter checks showed while there were no short circuits on pump conductors, there is no voltage at secondary side of contractor , insects got into panel via loose conduit and shorted out board. Replaced board. Sealed conduit. Found station completely flooded, isolated EQD and equalizer which were submerged. Check both and energized panel. Went into normal operation. And stopped. Cracked top seal and top well drained into tank and again kicked on for about 20 seconds until shutting off. Cycled system all is operating normally 5.9 A at 6a at 247v. Restored functionality.				

All material remains the property of Site Specific Design until final payment.
